玻璃棉簡介

Why Glasswool

各種玻璃原料在環保的電爐中，經過1400°C高溫熔解後，以離心法製成玻璃棉。

棉體中數以萬計的孔隙阻礙了熱能及聲波的傳遞，有效達到斷熱及吸音之效果，為目前市面上最經濟有效的隔熱降噪材料。

Glass batch are stored in silos, weighted, mixed and poured into the furnace. The melting process of the verifiable mix takes place in a electrical furnace heated to about 1400°C. The molten glass was fiberized into the final glass fibers.

The Key principle is that still air trapped in the space between the glass fibers is a very good insulator. Glass wool can be used in domestic, commercial and industrial applications to provide safe and comfortable controlling heat loss or gain.

台達玻璃棉完全在台灣生產，採用自動壓縮包裝，節省運輸成本及儲存空間，又因具有質輕、易裁切等特性，施工性極佳，有效降低了施工成本。

Taita Insulation is a local manufacture. The transportation and storage cost can be lower down with high compression packing. Light weight, easy cutting, quick application, keeps low installation cost.
